## EQX Media

EQX Media® provides expert .NET consultancy, assisting your company in designing, implementing, and managing IT solutions. Our team supports you with CI/CD, DevOps, software testing, automation, project management, release management, and quality assurance to tackle your IT challenges efficiently.

## About Us

Through a range of impressive projects, we have built extensive knowledge and experience in full-stack development. We have designed software architectures for, among others, (semi-)government bodies, the energy sector, laboratories, the transport industry, education, and the financial sector.

# About Our Services

## Delivering our finest work for your organisation

This catalogue provides an overview of the services our company offers, aimed at the realisation of IT solutions using .NET technology.

Our services are typically delivered in combination, enabling us to achieve the desired outcomes while making optimal use of our expertise.

You may choose to have your projects fully delivered by us, or alternatively, engage us to support you in the realisation of your own projects.

## Designed to bring your company's best ideas to life

With years of experience and a proven track record of successful software projects, our services have been carefully shaped and thoughtfully refined to meet the specific needs of your business.

Together with you, we work to turn your company's best ideas into reality. Merging your vision with our extensive expertise in .NET software architectures and implementations.

## Software Development

Combine creativity and technology to deliver innovative and scalable solutions. We support businesses with efficient systems aligned with their ambitions and operational needs, where strategic methods and modern technologies ensure highly robust software.

In addition to development, quality assurance is paramount. Thorough testing procedures guarantee performance, stability, and long-term reliability. Our structured approach and deep technical expertise enable organisations to navigate effectively within a rapidly evolving digital landscape and achieve sustainable, future-ready growth.

### Software Design

Translate your ideas into efficient software architectures with specified requirements and clear UML and flow diagrams.

Pseudo-code enhances the design process and promotes effective communication.

### .NET Development

Scalable .NET solutions for cloud and on-premises environments, with efficient and strategic use of APIs, serverless methods, and microservices. Cross-platform applications for desktops, tablets, and mobile devices.

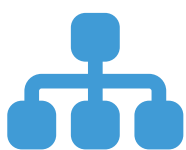

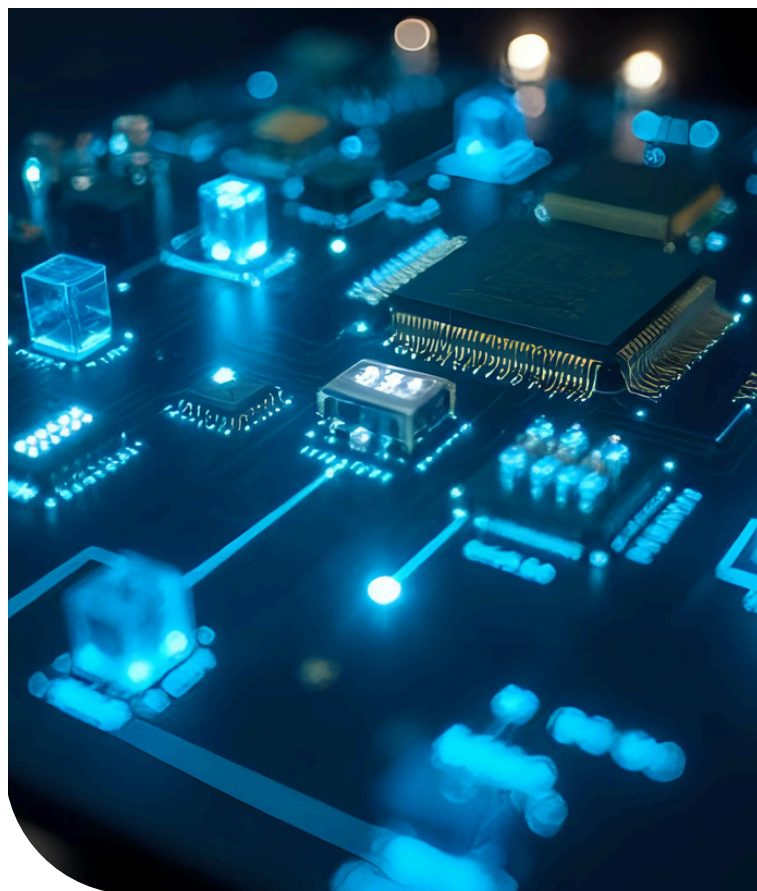

### Software Testing

Functional tests on all implementations to ensure long-term quality and consistent performance. Automated unit tests, integration tests, load tests, and performance tests to help keep your software highly reliable and resilient.

## DevOps

Efficient IT processes are essential for modern software development and for your business operations. Our services assist organisations in optimising workflows, accelerating development, and managing infrastructure effectively. With CI/CD, we ensure regular and efficient software updates. Automation increases productivity by streamlining repetitive processes and reducing costs. Our expert IT management provides optimal control of on-premises servers, APIs, and virtual environments. Thanks to in-depth expertise in infrastructure and automation, we support organisations in delivering scalable and reliable digital solutions.

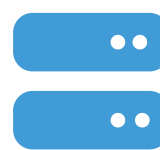

### CI/CD

Optimise development with CI/CD, integrating continuous deployment and delivery across your entire pipeline. This automated approach enables efficient, regular, smaller, and more frequent updates with improved consistency.

### Automation

Maximise efficiency with our advanced automation services. Manage everything from operating system updates to data synchronisation, and handle conditional process actions entirely automatically and with greater precision.

### IT Management

Optimise IT operations with expert management of servers, APIs, and virtual environments for maximum performance. Thanks to in-depth experience in automating Microsoft Windows and GNU/Linux, issues are resolved efficiently.

## Lifecycle Management

Effective software management requires structure, streamlined releases, and quality control. We support organisations in managing projects efficiently, implementing software smoothly, and optimising systems.

Our project management ensures clear workflows, well-defined roadmaps, and effective collaboration. Release management facilitates a seamless process from development to stable deployment. Quality assurance includes audits, static analysis, and security testing to ensure optimal software performance. With our expertise, organisations strengthen their digital solutions and competitive position.

### Project Management

Enhance project success with efficient management of backlogs, change requests, and user stories.

We ensure strong stakeholder alignment and detailed roadmaps to maintain clarity throughout the project.

### Release Management

From planning, development, and testing of new and modified software components to their release in a stable version.

With extensive experience in Release Management, we deliver successful releases.

### Quality Assurance

Assess and improve software quality with audits, static code analysis, automated security assessments, and Quality Gates.

Our thorough evaluations ensure fitness with the most reliable and secure IT solutions.
